

Use illustration below to verify proper fit. DO NOT use to determine initial AB measurement.

If kneepad does not fit as shown in illustration, the steps below will help determine the correct size you need.

1. While standing, put kneepads on and push all the way down, resting kneepads on top of shoe.

2. Measure from top of kneepad to top of kneecap.

3. This distance in inches will be added or subtracted from your AB Measurement to obtain the new size needed.
